

## ELLEPOTS-A Smart Propagation System

For many decades, polybags have been used as propagation method. But now Ellepot system is replacing it and delivering the package of automatic filling machine and degradable paper with many benefits in daily propagation. Ellepot is an eco-friendly growing system, which helps to grow larger and healthier roots, creating high-quality plants and eliminating the need for plastic.

Ellepots are root, air, and water permeable and made from all natural and environmentally friendly paper which degrades naturally and will not harm the environment. This ensures natural and fast root development resulting in the highest quality plants. Finally, the Ellepot system helps reducing logistics and labor costs through easier and faster transplanting, eliminates transplant shock, and increases plant quality, health, and structure.

## News and Events

Two weeks Home gardening course is going to start from 16-12-2019.

22-11-2019: Directorate of Floriculture arranged one day Discussion session for flower growers on 'Cut flower production' at Saggian flower market.

Ellepot Trays with Tubes
